Abstract

The e-governance models that are being applied in various parts of the world today have been reviewed in this paper. An e-governance model that took into account the peculiarities of the Nigerian populace has been formulated together with the preconditions for its viability. Also an e-platform for the application of the suggested model was specified by authors. It is hoped that this model would be a good starting point for the enhancement of e-governance process in Nigeria.

Keywords: e-governance, e-society, e-government, models and e-platform.
